DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains.

Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1-3 are rejected under 35 U.S.C. 103(a) as being unpatentable over Wallerstein (6,597,520).

Wallerstein (6,597,520) shows (see fig. 1):

Art Unit: 2872

a) a body of revolution mirror 38 having a convex portion, a revolution axis 12, a cutway section, imaging means 78, as claimed in claim 1, a wide angle lens 50, and a field of view of it coincides with a blind spot of the revolution mirror.

Wallerstein (6,597,520) does not clearly shows image processing means, but suggest for intended use, see col. 7, lines 41-44.

Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to use image processing means as suggested by Wallerstein (6,597,520) in the device of Wallerstein (6,597,520) to achieve the device as claimed, because the use of such image processing means would provide viewing of panoramic image of the object.
